

Company Profile

MEP and infrastructure contracting: fire protection, HVAC, plumbing, swimming pools and underground networks.

2026

Who we are

MSC for Modern Building is an Egyptian MEP and infrastructure contractor. We have delivered more than 50 projects for developers, hospitals, hotels, factories and commercial buildings across Egypt.

50+

Projects delivered

20+

Developers and companies worked for

8

Specialist scopes

We install and commission HVAC, plumbing, fire fighting, fire alarm, and gaseous and aerosol suppression systems, together with the underground water, fire and drainage networks that serve them, and the mechanical side of swimming pools.

Our work is judged on execution quality, technical compliance and safety, and on how well we coordinate with the consultant and the main contractor.

Every system is designed, installed and tested to the code that governs it. The references we work to on site and in the technical office are NFPA, FM Global, ASHRAE, SMACNA, the International Plumbing Code and the Egyptian Code.

Vision

To be a trusted MEP and infrastructure contracting partner, recognized for reliable execution, technical competence and long-term professional relationships.

Mission

To deliver high-quality MEP and infrastructure works through professional engineering practices, skilled site execution, and strict adherence to approved drawings, specifications and applicable codes, completing every project safely, on schedule and to the client's full satisfaction.

What we build

HVAC systems

- Ducted split air conditioning
- Ventilation and exhaust air systems
- Chilled water piping networks
- Testing, balancing and commissioning

Plumbing systems

- Potable water supply
- Sanitary and rainwater drainage
- Water storage tanks and plumbing fixtures
- Booster pump sets, testing and commissioning

Fire fighting systems

- Automatic sprinkler systems
- Fire hydrant and hose reel systems
- Fire pump rooms with electric, diesel and jockey pumps
- Foam systems for diesel and fuel tanks

Fire alarm systems

- Addressable and conventional systems
- Detectors and manual call points
- Control panels and notification devices
- System testing and coordination

What we build

Gaseous and aerosol suppression

- FM-200 and Novec 1230 systems
- CO2 total flooding systems
- Aerosol suppression systems
- Release panels with manual and abort stations

Infrastructure networks

- HDPE water, fire and irrigation networks
- Sanitary and storm drainage networks
- Manholes and inspection chambers
- Butt-fusion welding of HDPE pipe

Pump rooms and lifting stations

- Fire, domestic and irrigation pump rooms
- Sewage lifting stations and wet wells
- Installation and commissioning

Swimming pools

- Sand filters and circulation pumps
- Skimmers, inlets and pool pipework
- Deck showers and drainage
- Testing and start-up

How we work

Skilled site teams

Trained crews and experienced site engineers install to the approved drawings, specifications and method statements, with a supervisor on site the whole time.

Coordination

We work closely with consultants, main contractors and the other trades, so clashes and site issues are resolved early instead of on the day.

Health, safety and environment

Our people, equipment and sites are protected first. Safe work is a condition of every activity, not an add-on.

A working technical office

Shop drawings, material submittals, quantity take-offs, method statements and as-built drawings are prepared in-house and kept in step with the site through testing, commissioning and handover.

Schedule

Milestones are planned against real manpower and material availability, then tracked on site until they are met.

Codes and standards

Every system we install follows the code that governs it. These are the references we work to on site and in the technical office.

NFPA

Fire fighting, fire alarm and gas suppression

FM Global

Property loss prevention data sheets for fire protection

ASHRAE

Ventilation, refrigeration safety and energy in HVAC

SMACNA

Duct construction and sheet metal standards

IPC

International Plumbing Code for water supply and drainage

Egyptian Code

Fire protection, HVAC and plumbing

Trusted by

Wadi El Nile Group

El Qantara West Hospital
El Demerdash Hospital
Abbassia Chest Hospital

Amer Group for Tourism Development

Porto Said Village
Porto Said Hotel
Oval Towers, North Coast

Delmar for Tourism Development
